CONTENTS

NOTICE

* "SHARP" includes the meaning of Wuxi Sharp Electronic Components Co., Ltd.

The application circuit examples in this publication are provided to explain the representative applications of SHARP devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP devices, shown in catalogs, data books, etc. Contact to WUXI SHARP in order to obtain the latest device specification sheets before using any WUXI SHARP devices.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact to WUXI SHARP in order to obtain the latest specification sheets before using any WUXI SHARP devices. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

This device was developed for the China domestic market.

This device may make change of material in the range of specification sheet description for performance improvement etc.. Please understand in advance it. In that case we will contact you in advance.

The devices in this publication are designed for use in general electronic equipment designs , such as:

Consumer electronics / Personal computers / Office automation equipment / Telecommunication equipment / PDA(Personal digital assistant) / MID(Multimedia information display) / Audio visual equipment /

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment, such as:

・Transportation control and safety equipment(i.e., aircraft ,trains, automobiles etc.)

・Traffic signals ・Gas leakage sensor breakers ・Alarm equipment ・Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

・Military and space applications ・Nuclear power control equipment ・Medical equipment for life support

Contact to WUXI SHARP representative, in advance, when intending to use WUXI SHARP's devices for any "specific" applications other than those recommended by WUXI SHARP.

Contact and consult with a WUXI SHARP representative if there are any questions about the contents of this publication.

1. General

This TFT-LCD module is a color active matrix LCD (Liquid Crystal Display) module of transmissive type incorporating amorphous silicon TFT (Thin Film Transistor). General specification of the module is shown in the Table 3-1.It is composed of a color TFT-LCD panel, driver IC, FPC, backlight unit.

This TFT-LCD module is controlled by LCD driver IC NT35512H-DPBS/3AG. LCD driver IC basic specification refer to

the LCD driver IC specification sheet.

2. Features

- Utilizes a panel with a 3:5 aspect ratio, which makes the module suitable for use in wide screen systems.
- The 3.97 screen produces a high resolution image that is composed of 384,000 pixels elements in a stripe arrangement.
- Graphics and texts can be displayed on a 480 x RGB x 800 dots panel with 16,777,216 colors by supplying 24 bits (8 bits×RGB) data signal.
- Wide viewing field angle technology is employed.
- By adopting an active matrix drive, a picture with high contrast is realized.
- By COG method, realized a slim, lightweight, and compact module.
- Realized a high quality picture of the natural color appearance by adopting Normally Black Mode which is superior to the color appearance.
- 24bit RGB interface.

3. Mechanical specifications

Table 3-1

Parameter	Specifications	Units	Remarks
Display format	480×RGB×800	pixels	
Active area	51.84 (W)×86.4(H)	mm	
Screen size (Diagonal)	3.97	inch	
Dot pitch	0.108(H) X 0.108(V)	mm	
Display mode	Transmissive , Normally black	-	
Pixel configuration	R. G. B. 7° tilt stripe	-	
Viewing angle	Full viewing	-	
Outline dimensions(typ)	57.14(W)×96.85(H)×1.85(D)	mm	[Note3-1]
Mass	20 (Typ)	g	

[Note3-1] Typical values are shown.

For detailed measurements and tolerances, please refer to Fig.1.
(FPC, electronic parts are excepted.)

4. Input terminal and its function

4-1 TFT-LCD panel driving part

Table 4-1 Recommended connector : FH26-51S-0.3SHW

Pin No.	Symbol	I/O	Description	Remarks
1	LEDK	-	LED backlight cathode(-)	
2	LEDA	-	LED backlight anode(+)	
3	YU(NC)	-	No connection

5. Absolute maximum ratings

Teble5-1 Absolute maximum ratings GND=0V

Parameter		Symbol	MIN	MAX	Unit	Remark
Power Supply Voltage	Analog	VCI	-0.3	+4.4	V	Ta=25deg.C
	Digital	IOVCC	-0.3	+4.4	V	Ta=25deg.C
Input Signal		VI	-0.3	IOVCC+0.5	V	Ta=25deg.C
Output Signal		VO	-0.3	IOVCC+0.5	V	Ta=25deg.C
Back Light Input Current		ILEDK	-0.0002	30	mA	Ta=25deg.C
Back Light Input Voltage		VLEDK	-	25.6	V	Ta=25deg.C
Storage Temperature		Tstg	-30	80	deg.C	[Note5-1,2]
Operating Temperature		Topr1	-20	70	deg.C	[Note5-1,2,3]

1

[Note5-1] This rating applies to all parts of the module and should not be exceeded.

[Note5-2] Avoid dew condensation on the module.
Otherwise electrical current leaks will occur , and it cannot meet the specifications.

[Note5-3] The operating temperature guarantees only operation of the circuit. For contrast, speed of response, and other factors related to display quality are determined in the circumstances with Ta=25deg.C .

6. Electrical characteristics(DC Characteristics)

6-1 TFT-LCD panel driving section

Table6-1 GND=0V , Ta=25℃

Parameter	Symbol	Min	Typ	Max	Unit	Remark
Power Supply Voltage(Analog)	VCI	2.6	2.8	3.3	V	[Note6-1]
Power Supply Voltage(Didital)	IOVCC	1.7	1.8	3.3	V	[Note6-1]
Input Voltage(Low)	VIL	0	-	0.3IOVCC	V	[Note6-1]
Input Voltage(High)	VIH	0.7IOVCC	-	IOVCC	V	[Note6-1]
Input Current(Low)	IIL	-10	-	-	uA	
Input Curent(High)	IIH	-	-	10	uA	
Output Voltage(Low)	VOL	0	-	0.2IOVCC	V	IOL=+0.1mA
Output Voltage(High)	VOh	0.8IOVCC	-	IOVCC	V	IOH=-0.1mA
Power Consumption	Pnorm	-	75	-	mW	[Note6-1]

[Note6-1]

1. Conditions : Ta=25deg.C,VCI=2.8V,IOVCC=1.8V,Refresh rate=60Hz,Ta=-20 to +70deg.C operational
2. Pnorm: Power Consumption of normal display mode.

6-2 LED back light driving section

Table6-2 GND=0V , Ta=25℃

Parameter	Symbol	Min	Typ	Max	Unit	Remark
Back Light Input Current	ILB	-	20	-	mA	[Note6-2,3]
Back Light Input Voltage	VBL	20.8	-	25.6	V	[Note6-2]
Back Light Power Comsuption	PBL	-	-	720	mW	[Note6-4]

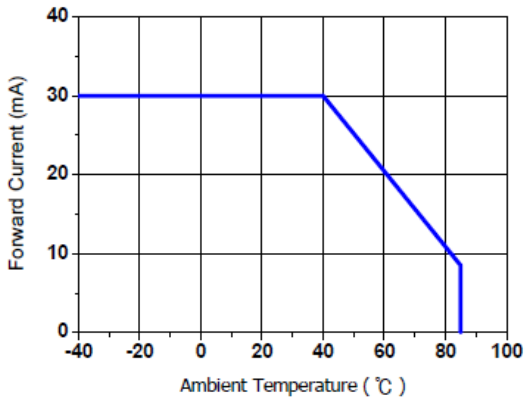
1

[Note6-2] Apply to terminal of LEDK

[Note6-3] For better LED Backlight driving quality, it is recommended to utilize the adaptive boost Converter with current balancing function to drive LED Backlight.

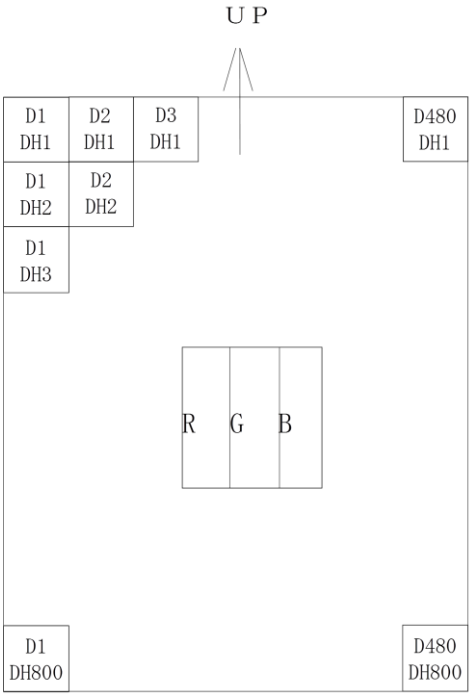
[Note6-4] P_{BL} = IBL ×VBL (Without LED converter transfer efficiency)

[Note6-5] Ambient Temperature – Allowable Forward Current



7. Electrical characteristics (AC Characteristics/FUNCTIONAL DESCRIPTION)

7-1 Input Data Signals and Display Position on the screen



Display position of input data (H,V)

7-2. Serial Interface Characteristics

Serial Interface detail information refer to LCD driver IC specification sheet.

7-2-1 Serial Interface Timing Diagrams

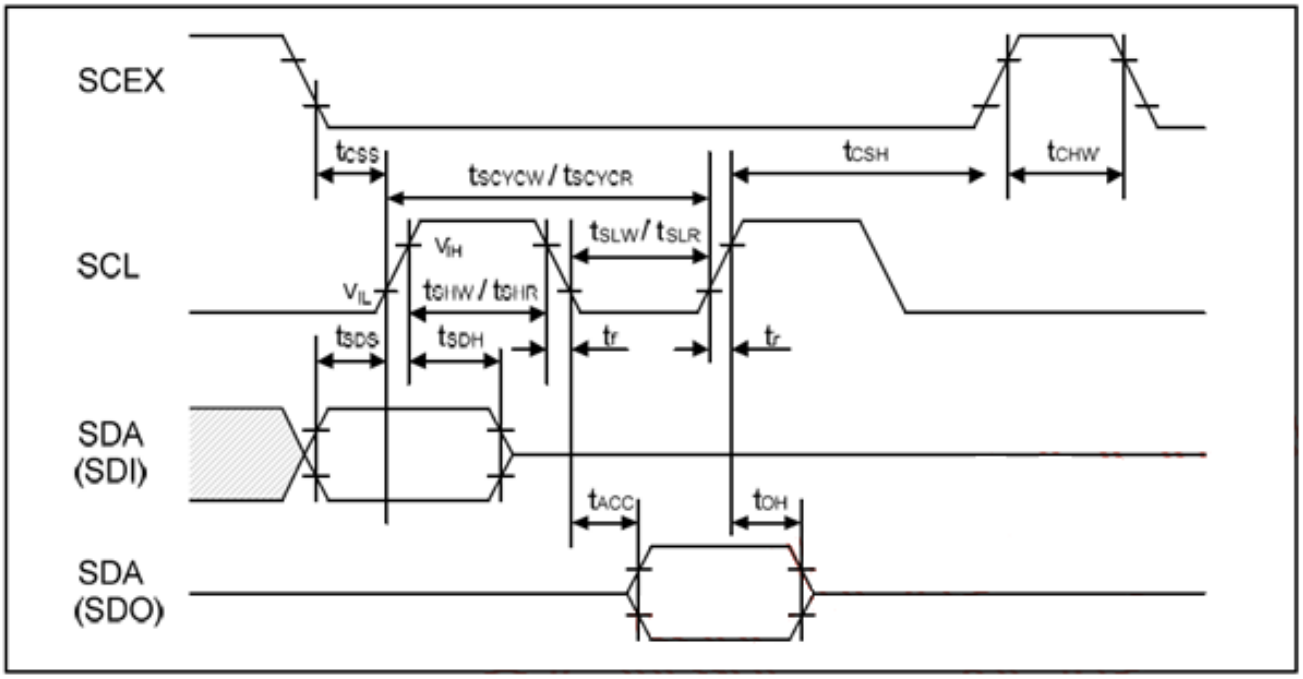


Table7-2

Signal	Symbol	Parameter	MIN	MAX	Unit	Remark
SCL	tSCYCW	Serial clock cycle(Write)	100	-	ns	
	tSHW	SCL"H"pulse width(Write)	40	-	ns	
	tSLW	SCL"L"pulse width(Write)	40	-	ns	
	tSCYCR	Serial clock cycle(Read GRAM)	300	-	ns	
	tSHR	SCL"H"pulse width(Read GRAM)	140	-	ns	
	tSLR	SCL"L"pulse width(Read GRAM)	140	-	ns	
	tSCYCR	Serial clock cycle(Read ID)	300	-	ns	
	tSHR	SCL"H"pulse width(Read ID)	140	-	ns	
	tSLR	SCL"L"pulse width(Read ID)	140	-	ns	
SDI(SDO)	tSDS	Data setup time	20	-	ns	
	tSDH	Data hold time	20	-	ns	
	tACC	Access time		120	ns	
	tOH	Output disable time	5	-	ns	
CSX	tCHW	Chip select "H" pulse width	45	-	ns	
	tCSS	Chip select setup time	20	-	ns	
	tCSH	Chip select hold time	50	-	ns	

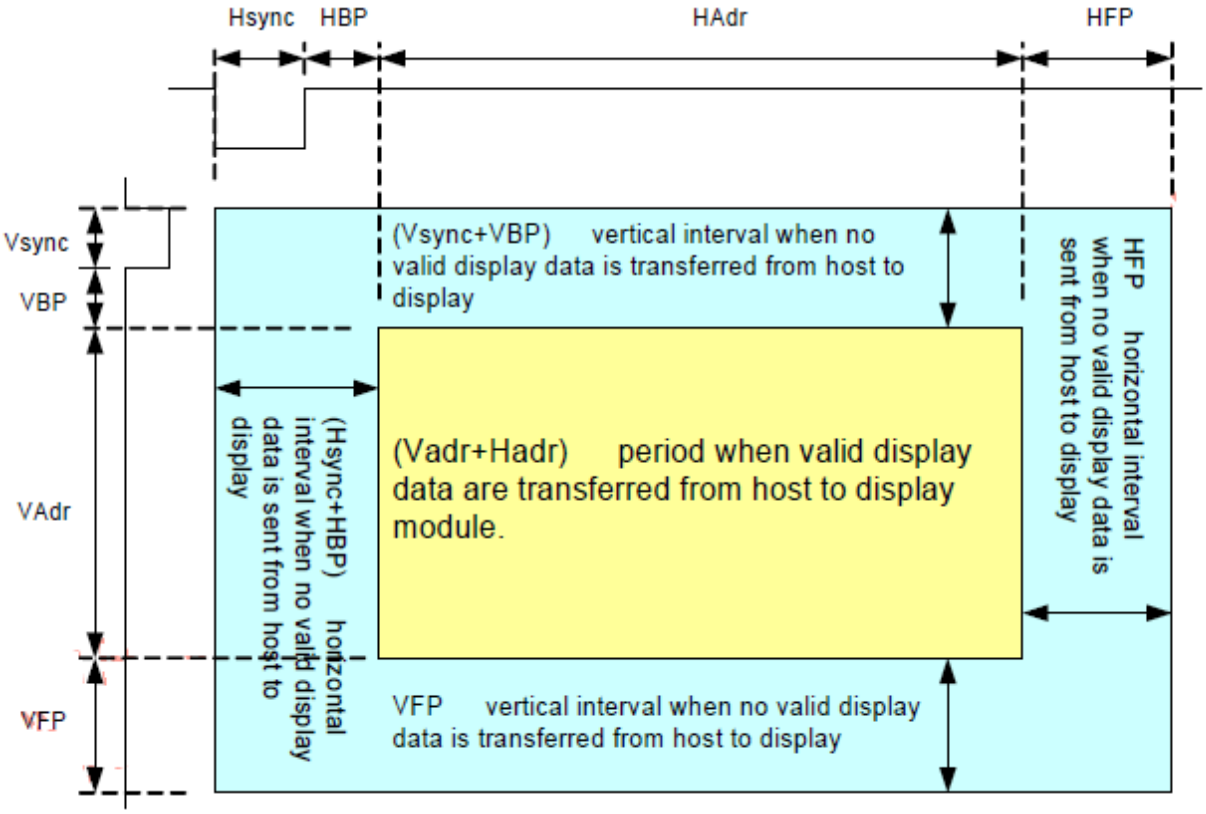
[Note7-1] VCI=2.6V to 3.3V, IOVCC=1.7V to 3.3V, GND=0V, Ta=-20 to 70 deg.C

[Note7-2] The input signal rise time and fall time (tr, tf) is specified at 15 ns or less.
Logic high and low levels are specified as 20% and 80% of VDDI for Input signals.

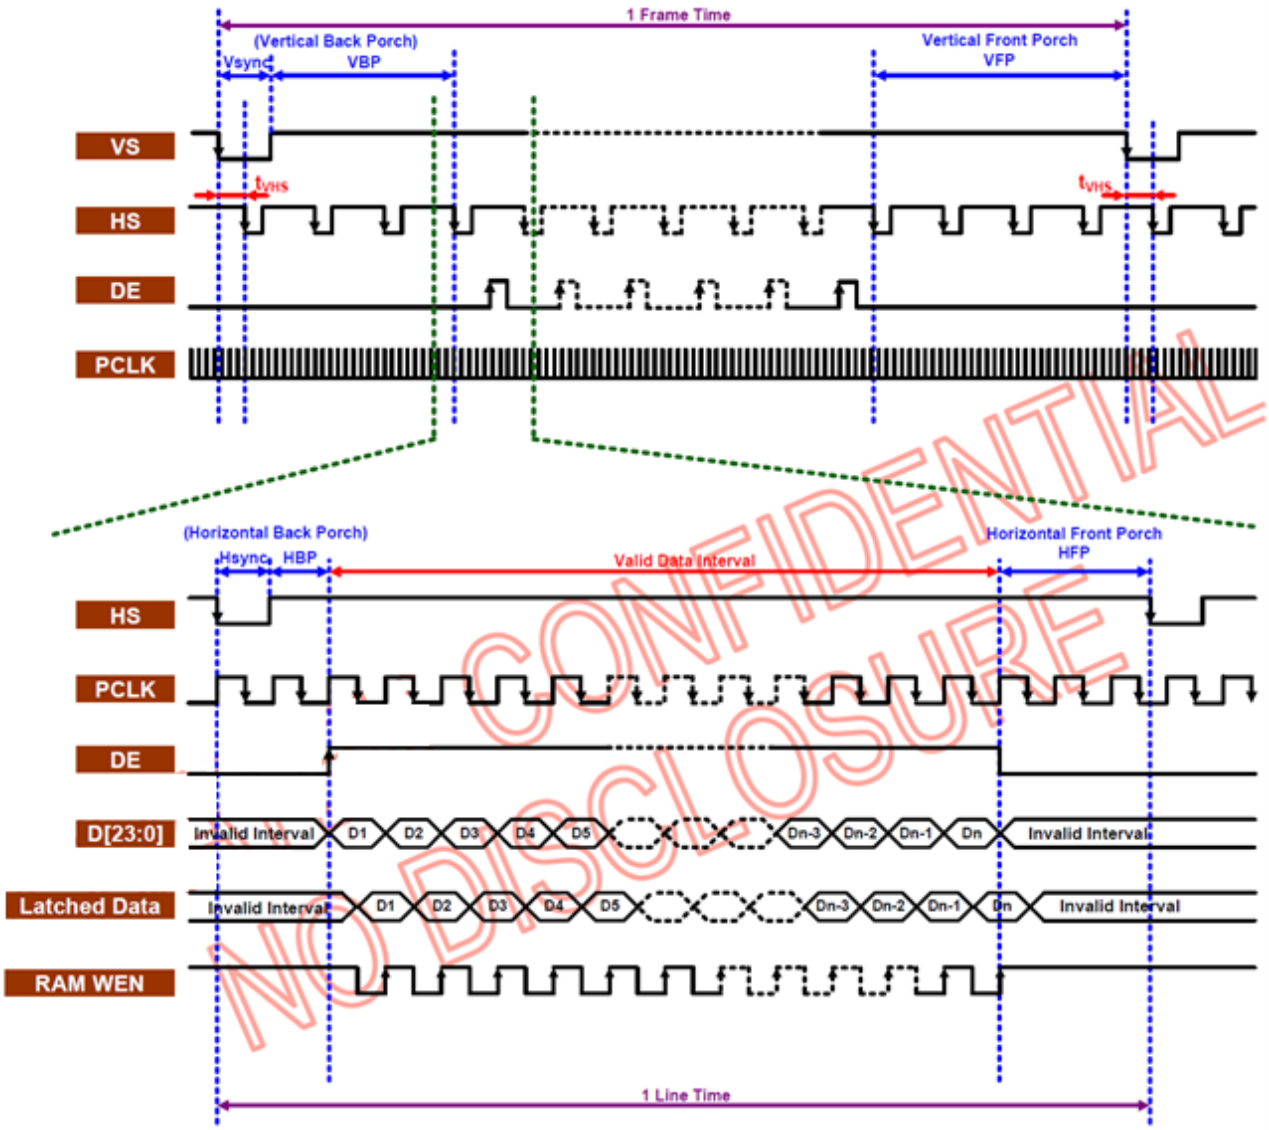
7-3. RGB Interface Characteristics

RGB Interface more detail information refer to LCD driver IC specification sheet.

7-3-1 RGB Interface General Timing Diagram



7-3-2 Video signal data writing method in RGB Interface



Notes:

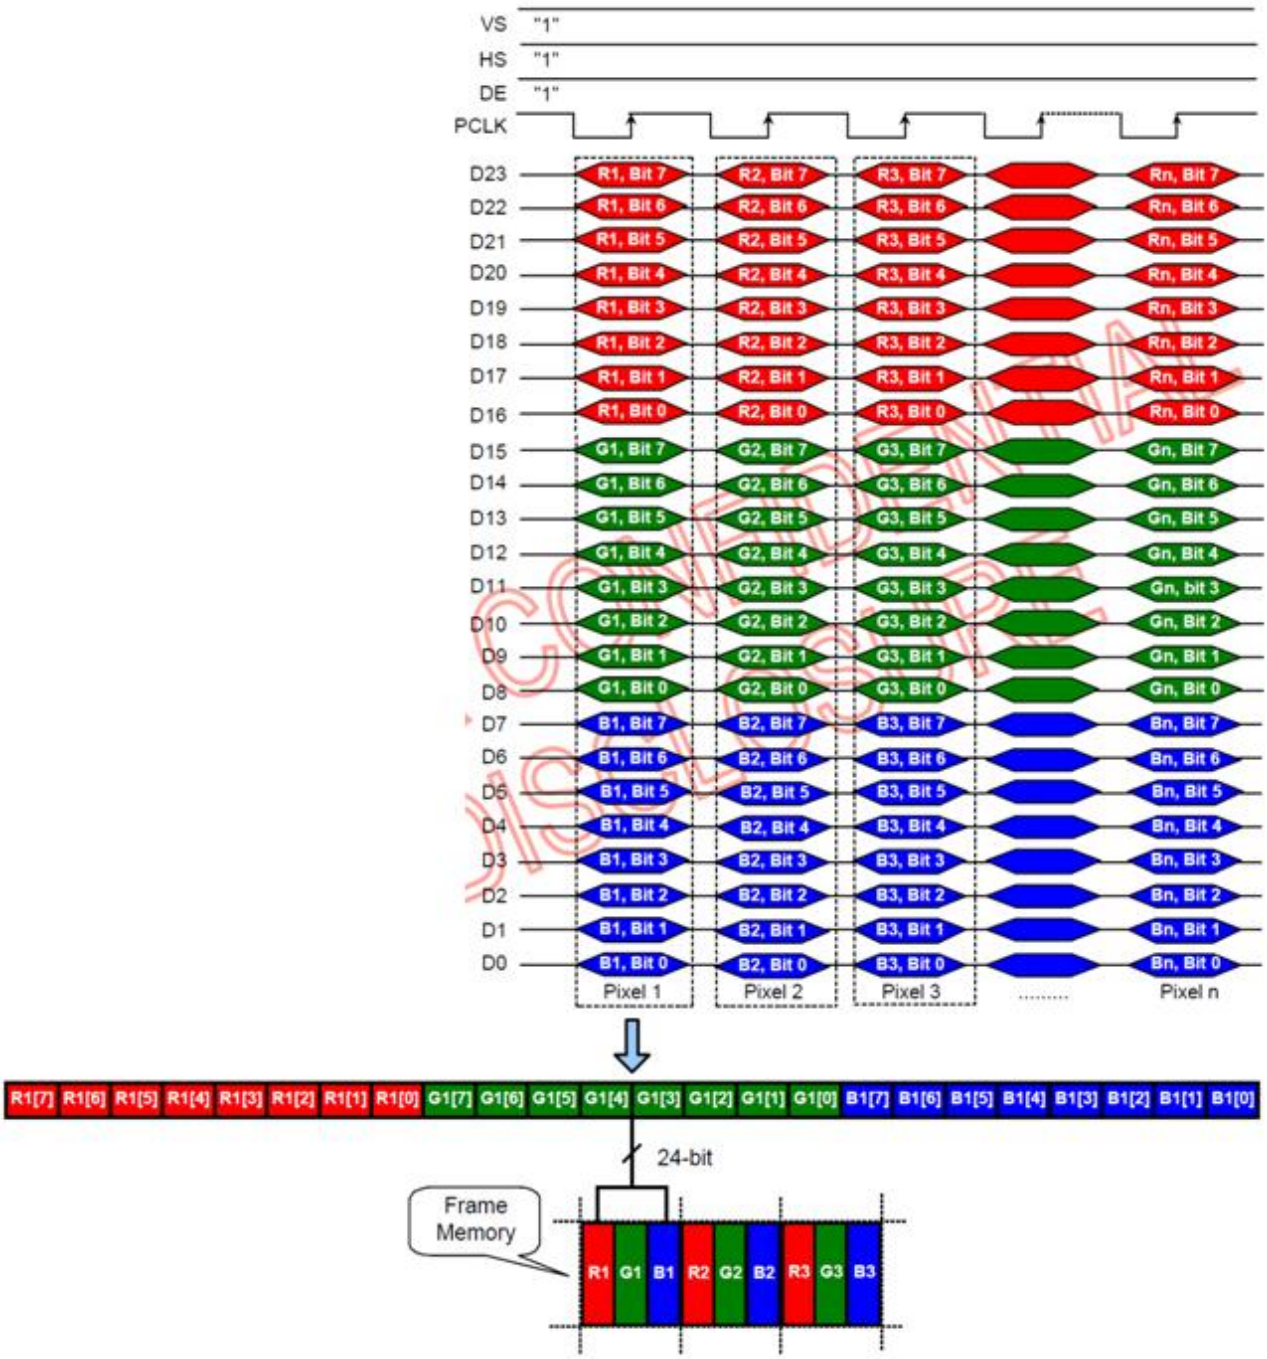
1. Constraint:
   V-Back Porch (Vsync+VBP)≧ 5 HS lines, V-Front-Borch (VFP) ≧ 2 HS lines
   H-Back Porch (Hsync+HBP)≧ 5 PCLK clocks, H-Front-Porch (HFP) ≧ 2 PCLK clocks
2. tVHS≧ 0ns

Note2:

RGB interface with SPI Timing Sequence is refer to LCD driver IC specification sheet.

Parameters	Symbols	Min.	Typ.	Max.	Units
PCLK Cycle	tDCYC	33	49.8	125	ns
Pixel Clock Low Duration	tDLW	11	-	-	ns
Pixel Clock High Duration	tDHW	11	-	-	ns
Horizontal Synchronization	Hsync	5	9	-	PCLK
Horizontal Back Porch	HBP	5	30	-	PCLK
Horizontal Address	Hadr	480	480	-	PCLK
Horizontal Front Porch	HFP	5	16	-	PCLK
Vertical Synchronization	Vsync	2	5	-	Line
Vertical Back Porch	VBP	2	3	-	Line
Vertical Address	Vadr	800	800	-	Line
Vertical Front Porch	VFP	2	3	-	Line
Vertical Frequency	VF	55	60	65	Hz
Horizontal Frequency	HF	-	-	-	KHz
PCLK Frequency	PF	20.3	23.5	28.1	MHz
Vsync setup Time	tVSYNS	10	-	-	ns
Vsync hold Time	tVSYNH	10	-	-	ns
Hsync setup Time	tHSYNS	10	-	-	ns
Hsync hold Time	tHSYNH	10	-	-	ns
Data setup Time	tDDS	10	-	-	ns
Data Hold Time	tDDH	10	-	-	ns

7-3-3 Write data for RGB interface bus width set



7-3-4 Detailed Timing for RGB interface

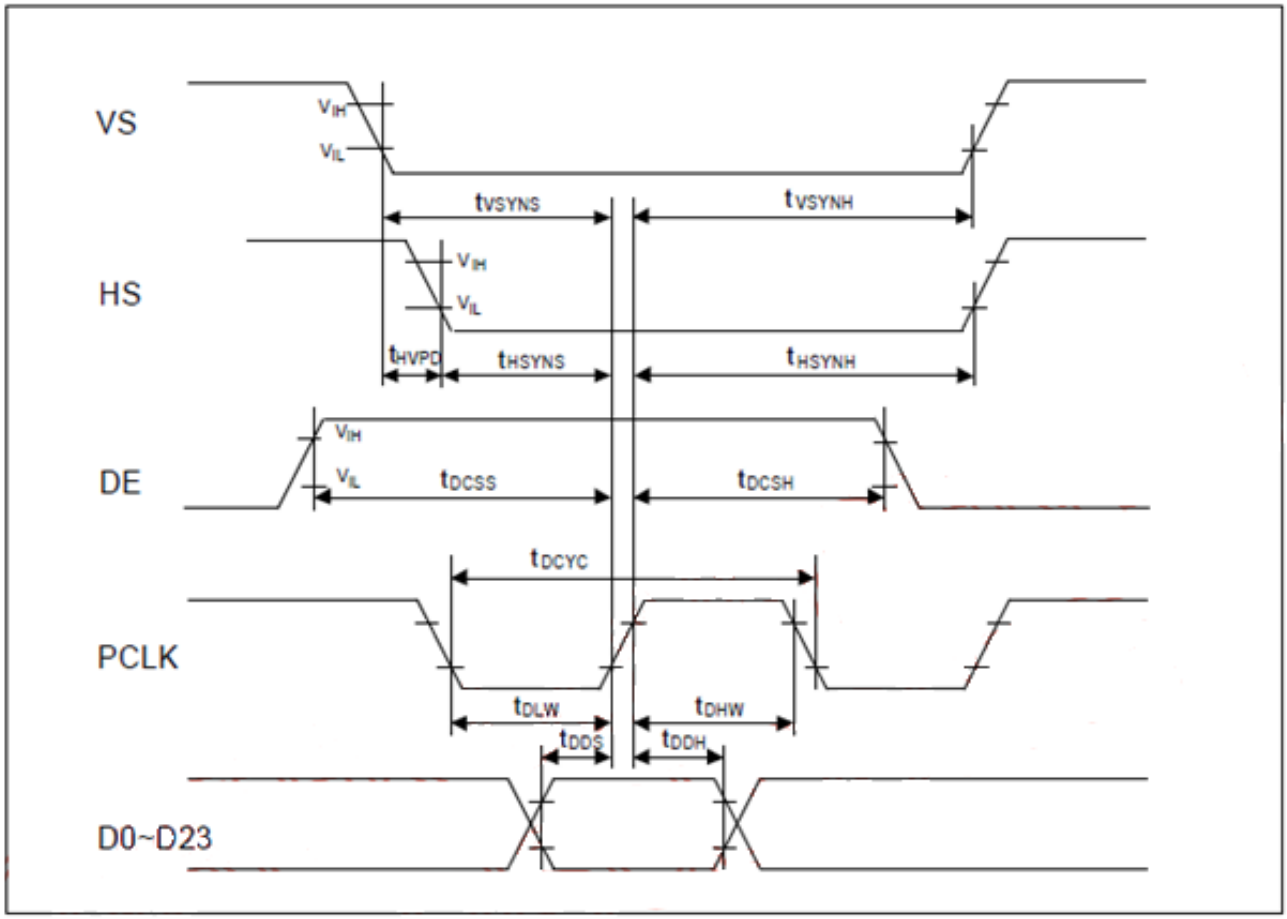


Table7-3

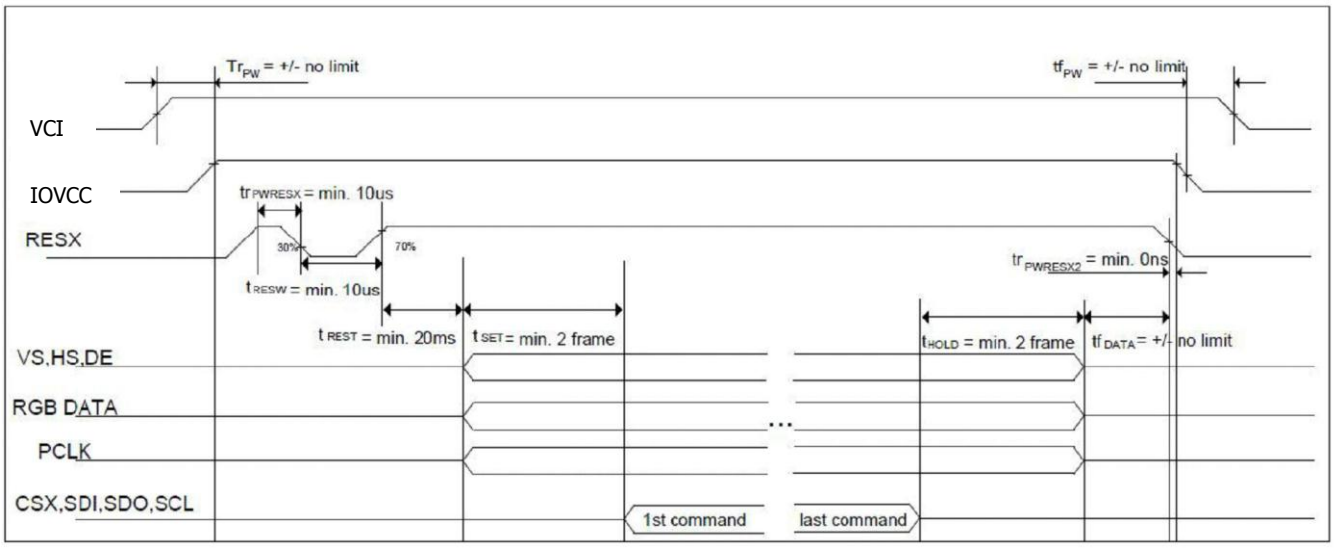
Signal	Symbol	Parameter	MIN	MAX	Unit	Remark
VS	tVSYNS	VSYNC setup time	10	-	ns	
	tVSYNH	VSYNC hold time	10	-	ns	
HS	tHSYNS	HSYNC setup time	10	-	ns	
	tHSYNH	HSYNC hold time	10	-	ns	
	tHVPD	HSYNC to VSYC falling edge	400	-	ns	
PCLK	tDCYC	PCLK cycle time	33	125	ns	
	tDLW	PCLK "L" pulse width	11		ns	
	tDHW	PCLK "H" pulse width	11	-	ns	
	tDFREQ	PCLK frequency	8	-	ns	
DE	tDCSS	DE setup time	10	-	ns	
	tDCSH	DE hold time	10	-	ns	
D0-D23	tDDS	RGB data setup time	10	-	ns	
	tDDH	RGB data hold time	10	-	ns	

[Note7-3] VCI=2.6V to 3.3V, IOVCC=1.7V to 3.3V, GND=0V, Ta=-20 to 70 deg.C
[Note7-4] The input signal rise time and fall time (tr, tf) is specified at 15 ns or less.
Logic high and low levels are specified as 20% and 80% of VDDI for Input signals.

8. Power On/Off Sequence

Recommended Power On / Off Sequence
The LCD adopts high voltage driver IC, so it could be permanently damaged under a wrong power on/off sequence. The suggested LCD power sequence is below:



9. Reset input timing

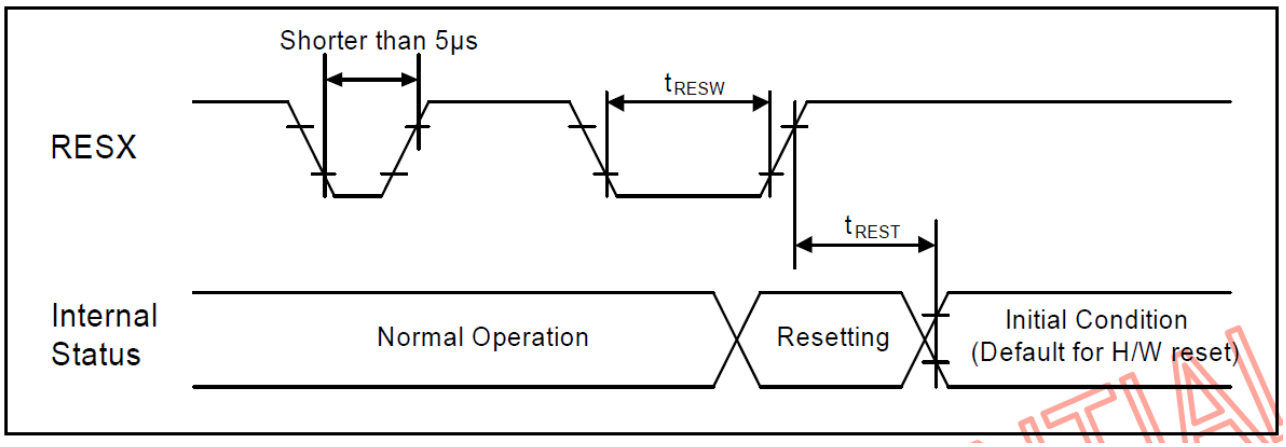


Table9-1

Symbol	Parameter	MIN	TYP	MAX	Unit	Remark
tRESW	Reset low pule width	10	-	-	ns	
tREST	Reset complete width	-	-	120	ms	

[Note9-1] VCI=2.6V to 3.3V, IOVCC=1.7V to 3.3V, GND=0V, Ta=-20 to 70 deg.C
[Note9-2] Detail information refer to LCD driver IC specification sheet.

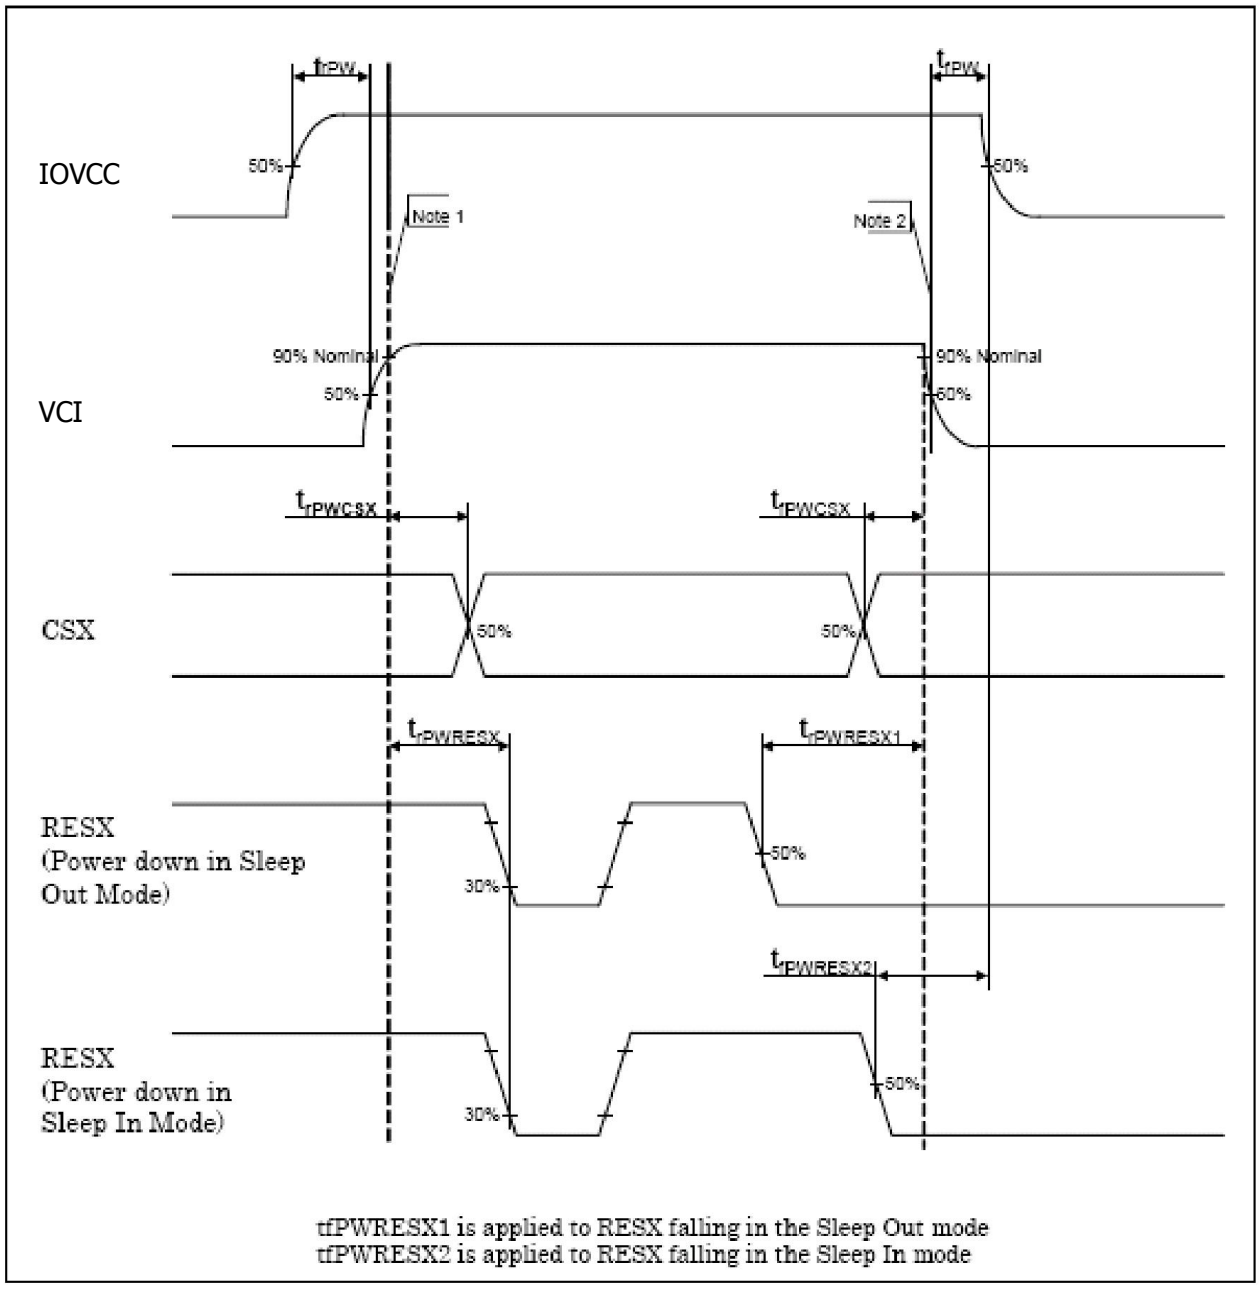
10. Initial Sequence

During power on, ‘RESX’ must be applied for a minimum of 10us after both VCI and IOVCC have been applied. ‘RESX’ can be undefined during power-on but must be applied subsequently to ensure correct LCD controller operation. IOVCC and VCI can be applied in any order.

During power-off, if the LCD controller is in ‘Sleep Out’ mode, VCI and IOVCC must be powered down a minimum of 120ms after RESX has been released. If the LCD controller is in ‘Sleep In’ mode, IOVCC and VCI can be powered down a minimum of 0ms after ‘RESX’ has been released. IOVCC and VCI can be powered down in any order.

‘CSX’ can be applied at any time. ‘RESX’ has priority over ‘CSX’.

10-1 Case 1 - RESX line is held high or unstable by host at power-on

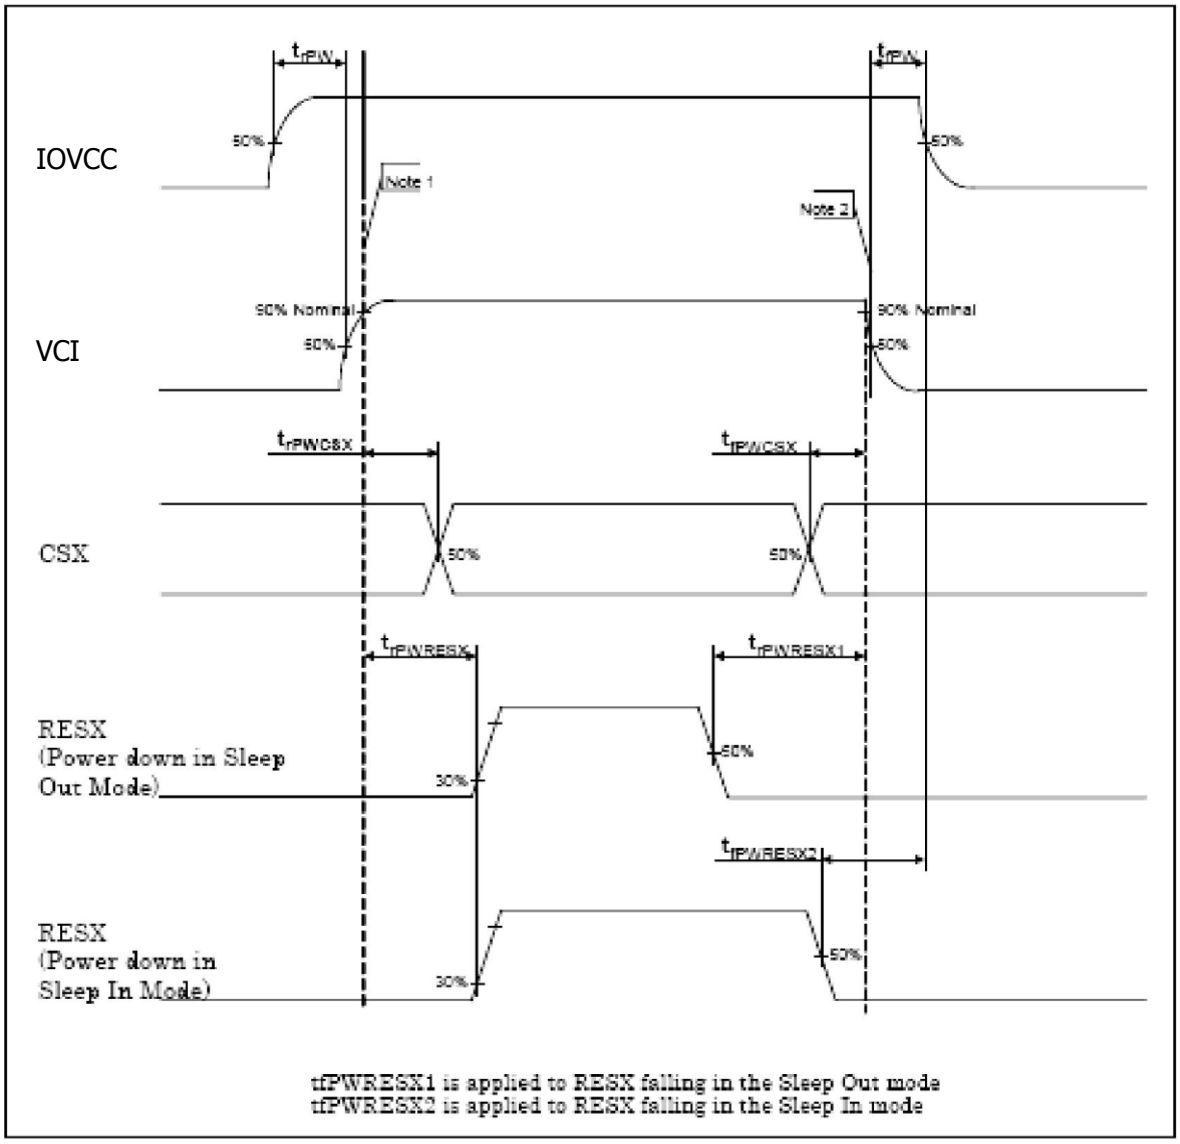


Note 10-1. Time when the latter signal rises up to 90% of its typical value, e.g. when VCI comes later. This time is defined at the cross point of 90% of VCI Typ, not VCI Min, (see Table4).

Note 10-2. Time when the former signal falls down to 90% of its typical value, e.g. when VCI falls earlier.This time is defined at the cross point of 90% of VCI Typ, not VCI Min.

Parameter	Value
trPW	+/- no limit
tfPW	+/- no limit
trPWCSX	+/- no limit
tfPWCSX	+/- no limit
trPWRESX	+ no limit
tfPWRESX1	min 120mS
tfPWRESX2	+ no limit

10-2 Case 2 - RESX line is held low by host at power-on



Note 10-3. Time when the latter signal rises up to 90% of its typical value, e.g. when VCI comes later.

This time is defined at the cross point of 90% of VCI Typ, not VCI Min, (see Table4).

Note 10-4. Time when the former signal falls down to 90% of its typical value, e.g. when VCI falls earlier.

This time is defined at the cross point of 90% of VCI Typ, not VCI Min, (see Table4).

Parameter	Value
trPW	+/- no limit
tfPW	+/- no limit
trPWCSX	+/- no limit
tfPWCSX	+/- no limit
trPWRESX	min 10 us
tfPWRESX1	min 120mS
tfPWRESX2	min 0mS

Note

There will be no damage to the display module if the above power sequences are not met.

There will be no abnormal visible effects on the display panel during the sequence.

There will be no abnormal visible effects on the display between the end of power on sequence and before entering Sleep Out mode. Also between entering Sleep In mode and power off sequence.

There are no limits for RESX timings during power on sequence. (e.g. from the undefined level to High or low, when the first RESX low pulse after VDD and IOVCC are powered-on, etc.)

10-3 Uncontrolled Power-off

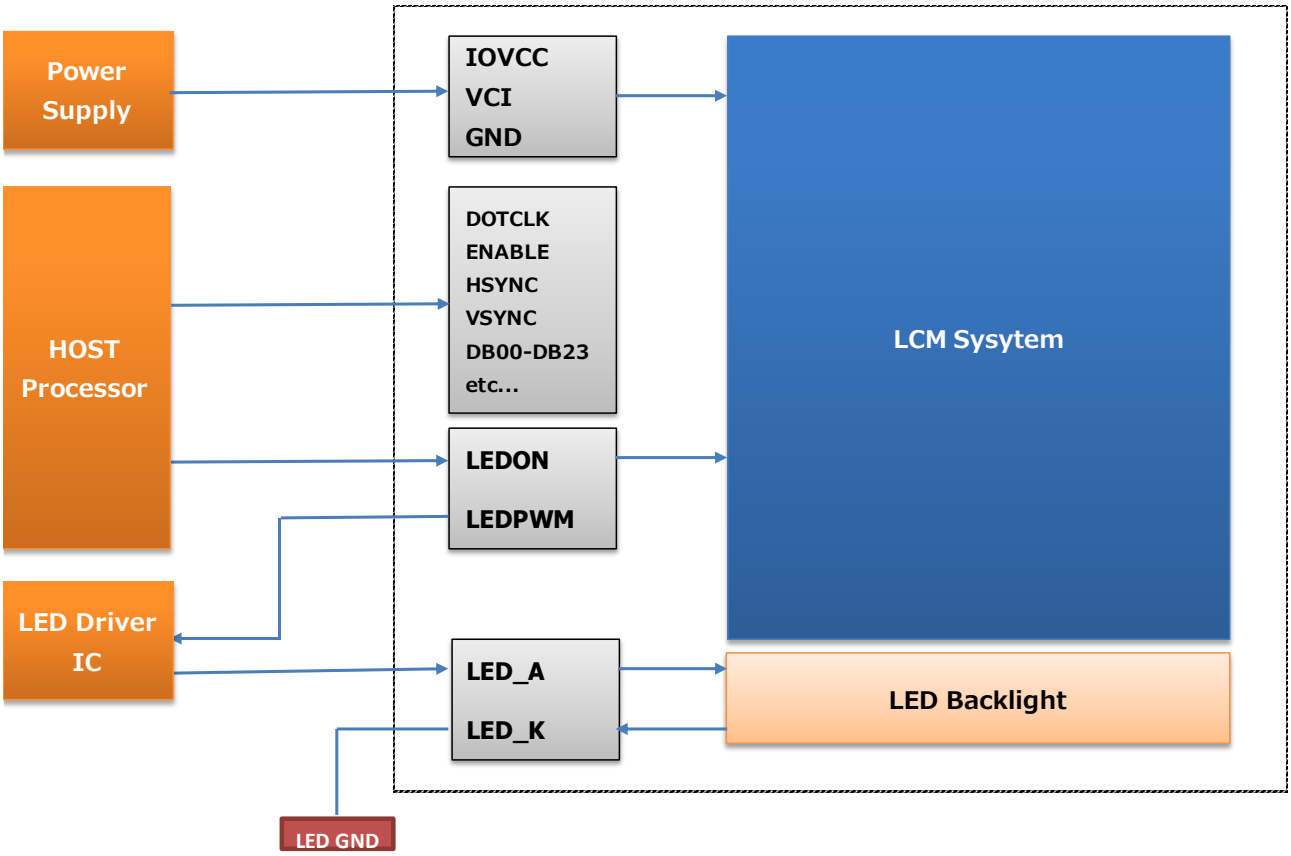
Uncontrolled power-off (e.g. the battery is removed without following the proper power-off sequence), will not damage the LCD module or cause the LCD module to inflict any damage on the host.

There will not be any abnormal visible effects left on the display after a period of 5 seconds following an uncontrolled power-off. The display will remain blank until the power on sequence is initiated.

11. Internal Display Backlight Control (PWM Control、CABC)

PWM control,CABC(Content Adaptive Brightness Control) function detail information refer to LCD driver IC specification sheet.

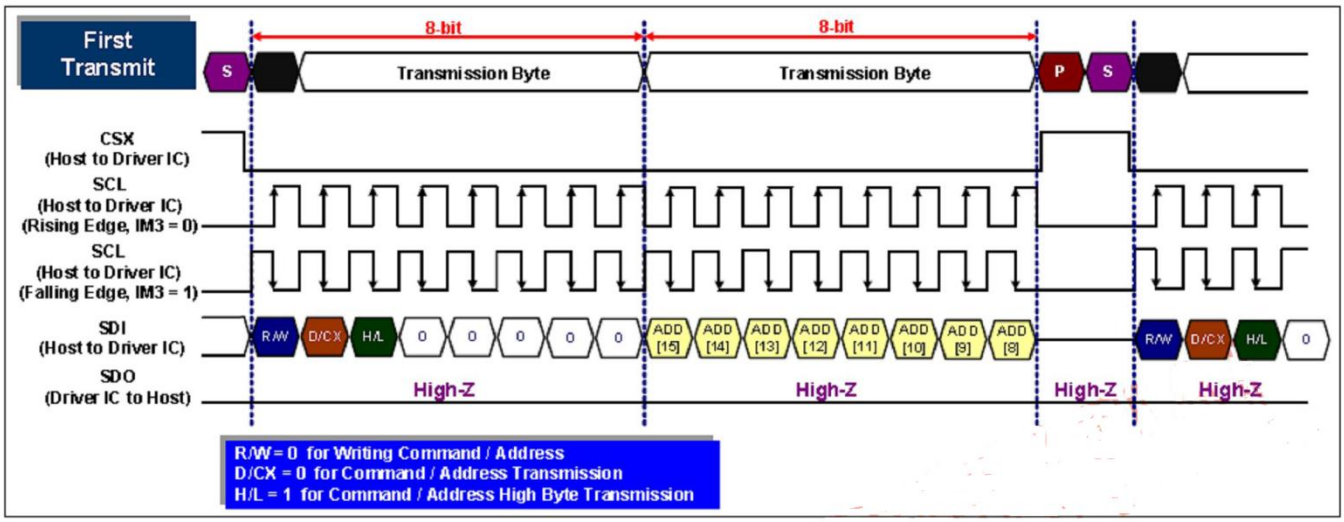
LQ040Y3DX80B Baclight control application

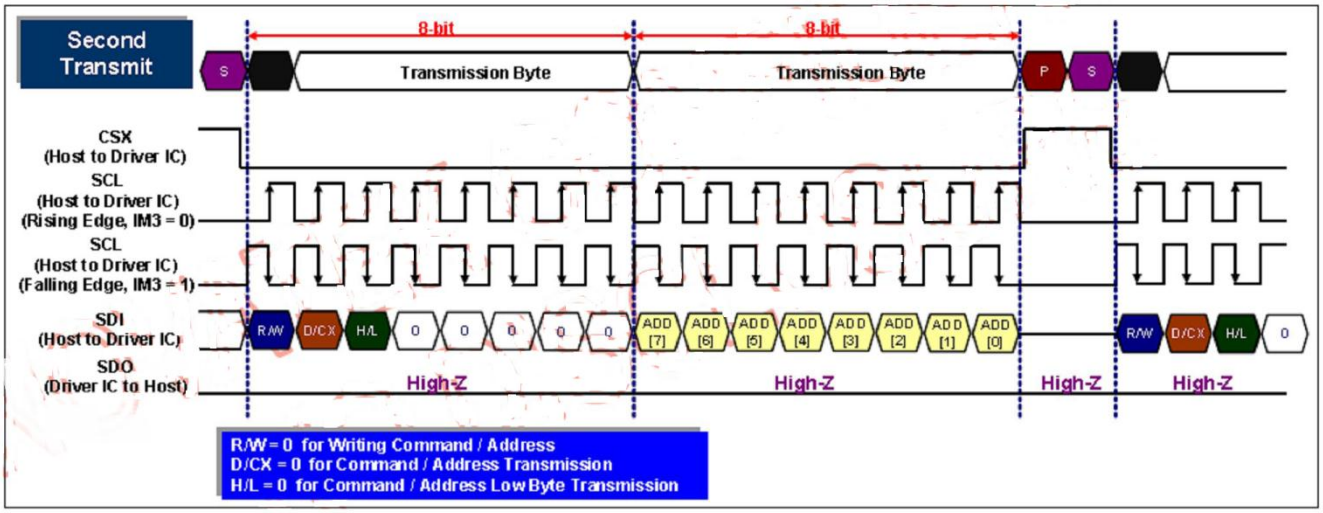


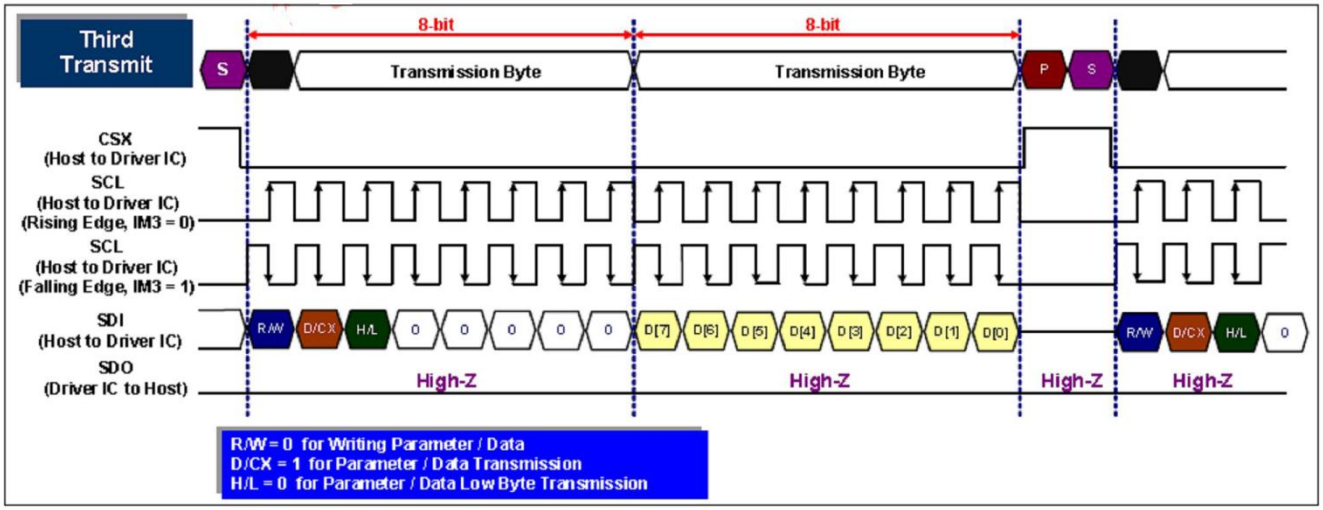
12. Serial Interface

The serial interface, the trigger edge of serial clock (SCL) is rising edge . The serial interface is used to communication between the micro controller and the LCD driver chip. It contains CSX (chip select), SCL (serial clock), SDI (serial data input) and SDO (serial data output). Serial clock (SCL) is used for interface with MPU only, so it can be stopped when no communication is necessary. If the host places the SDI line into high-impedance state during the read intervals, then the SDI and SDO can be tied together.

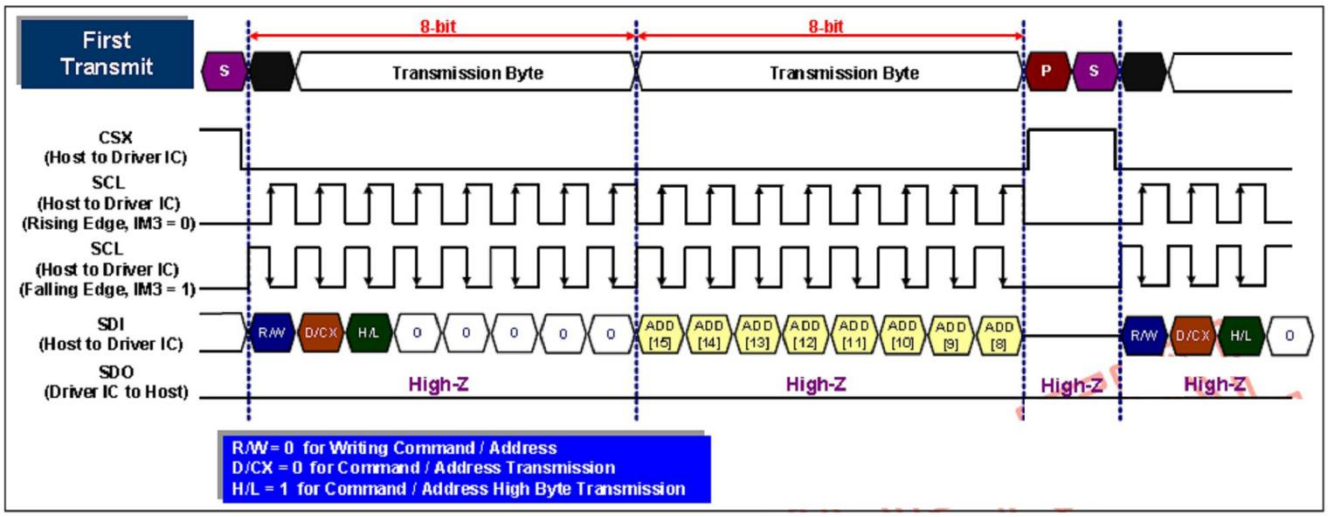
12-1 Write Mode

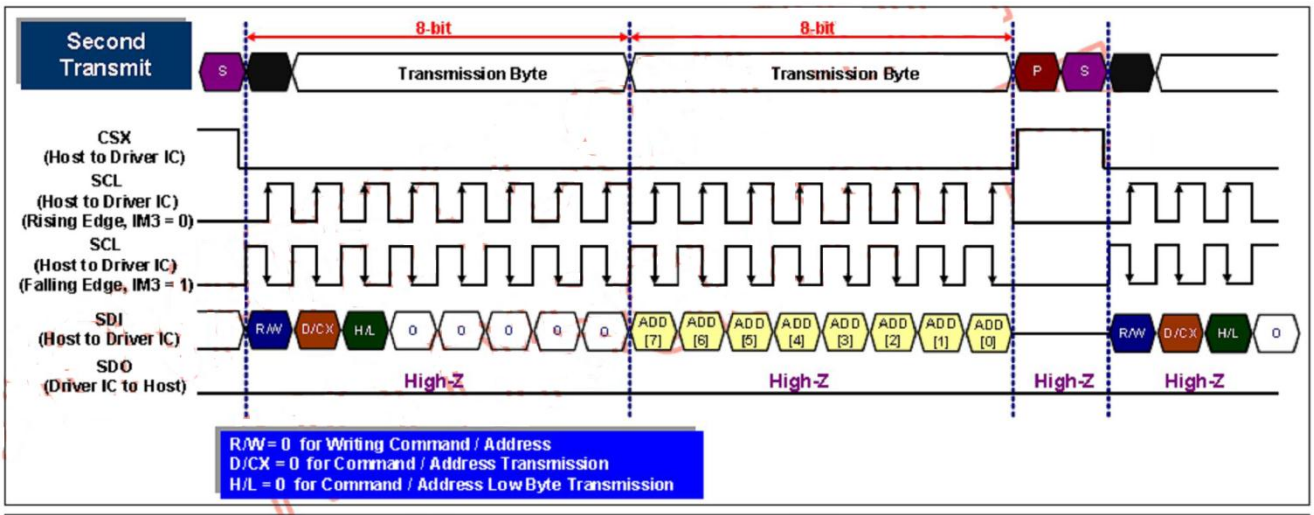


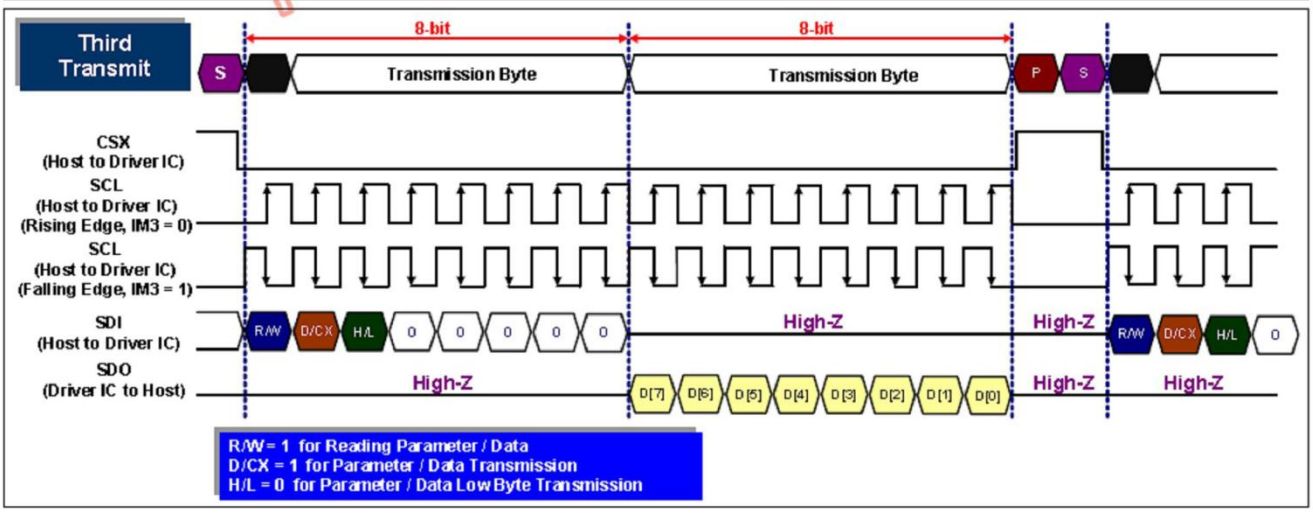




12-2 Read Mode







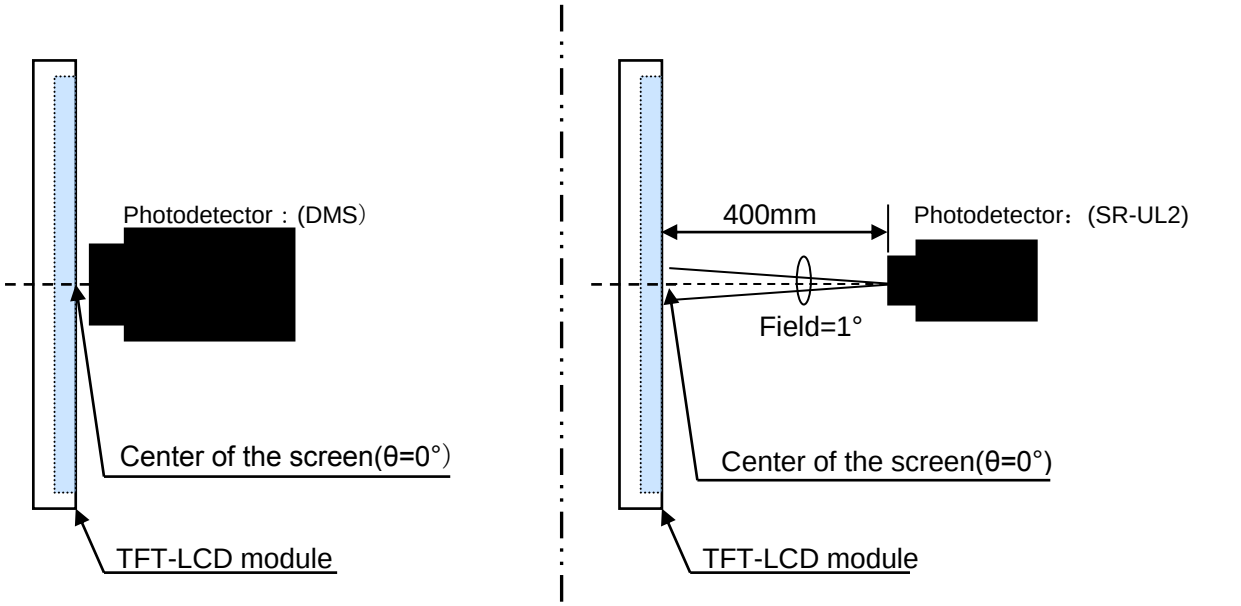
13. Optical characteristics

Table13-1 Optical characteristics Ta=25℃

Item		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Response time		Tr+Td	θ=0°	-	35	-	ms	Note13-3
Brightness		Br	θ=0°	480	600	-	Cd/m2	Note13-4
Contrast ratio		CR	θ=0°	490	650	-	-	Note13-2
Viewing Angle	Top		CR≥10	80	85	-	degree	Note13-1
	Bottom			80	85	-		
	Left			80	85	-		
	Right			80	85	-		
White Chromaticity		X	CIE	0.25	0.30	0.35	-	Note13-4
		Y		0.27	0.32	0.37	-	Note13-4
NTSC ratio			-	-	70	-	%	Note13-4

[Note13-1]

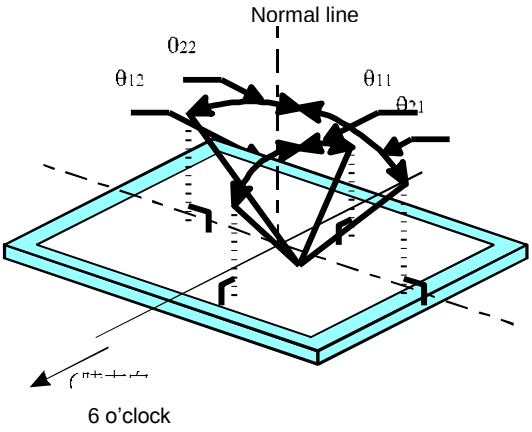
The optical characteristics measurements are operated under a stable luminescence (I_{LED} = 20mA) and a dark condition.



Viewing angle range/Response time measurement method

Luminance/Contrast/Chromaticity measurement method

[Note13-2] Definitions of viewing angle range



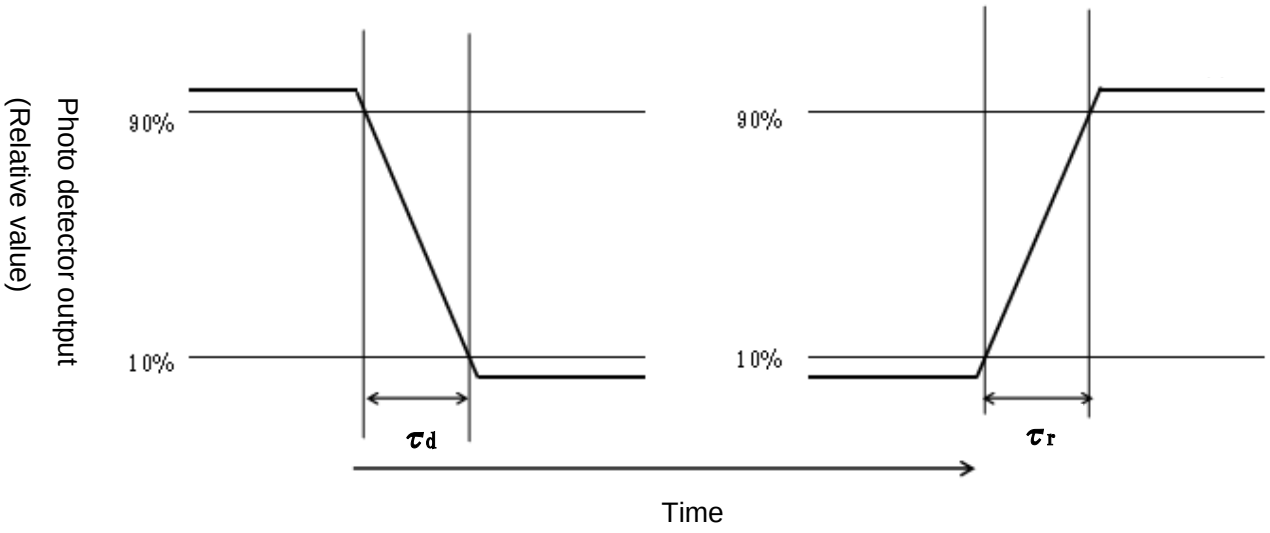
[Note13-3] Definition of contrast ratio

The contrast ratio is defined as the following

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance(brightness) with all pixels white}}{\text{Luminance(brightness) with all pixels black}}$$

[Note13-4] Definition of response time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white"



[Note13-5] This shall be measured at center of the screen.

14. Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD.

15. Mechanical characteristics

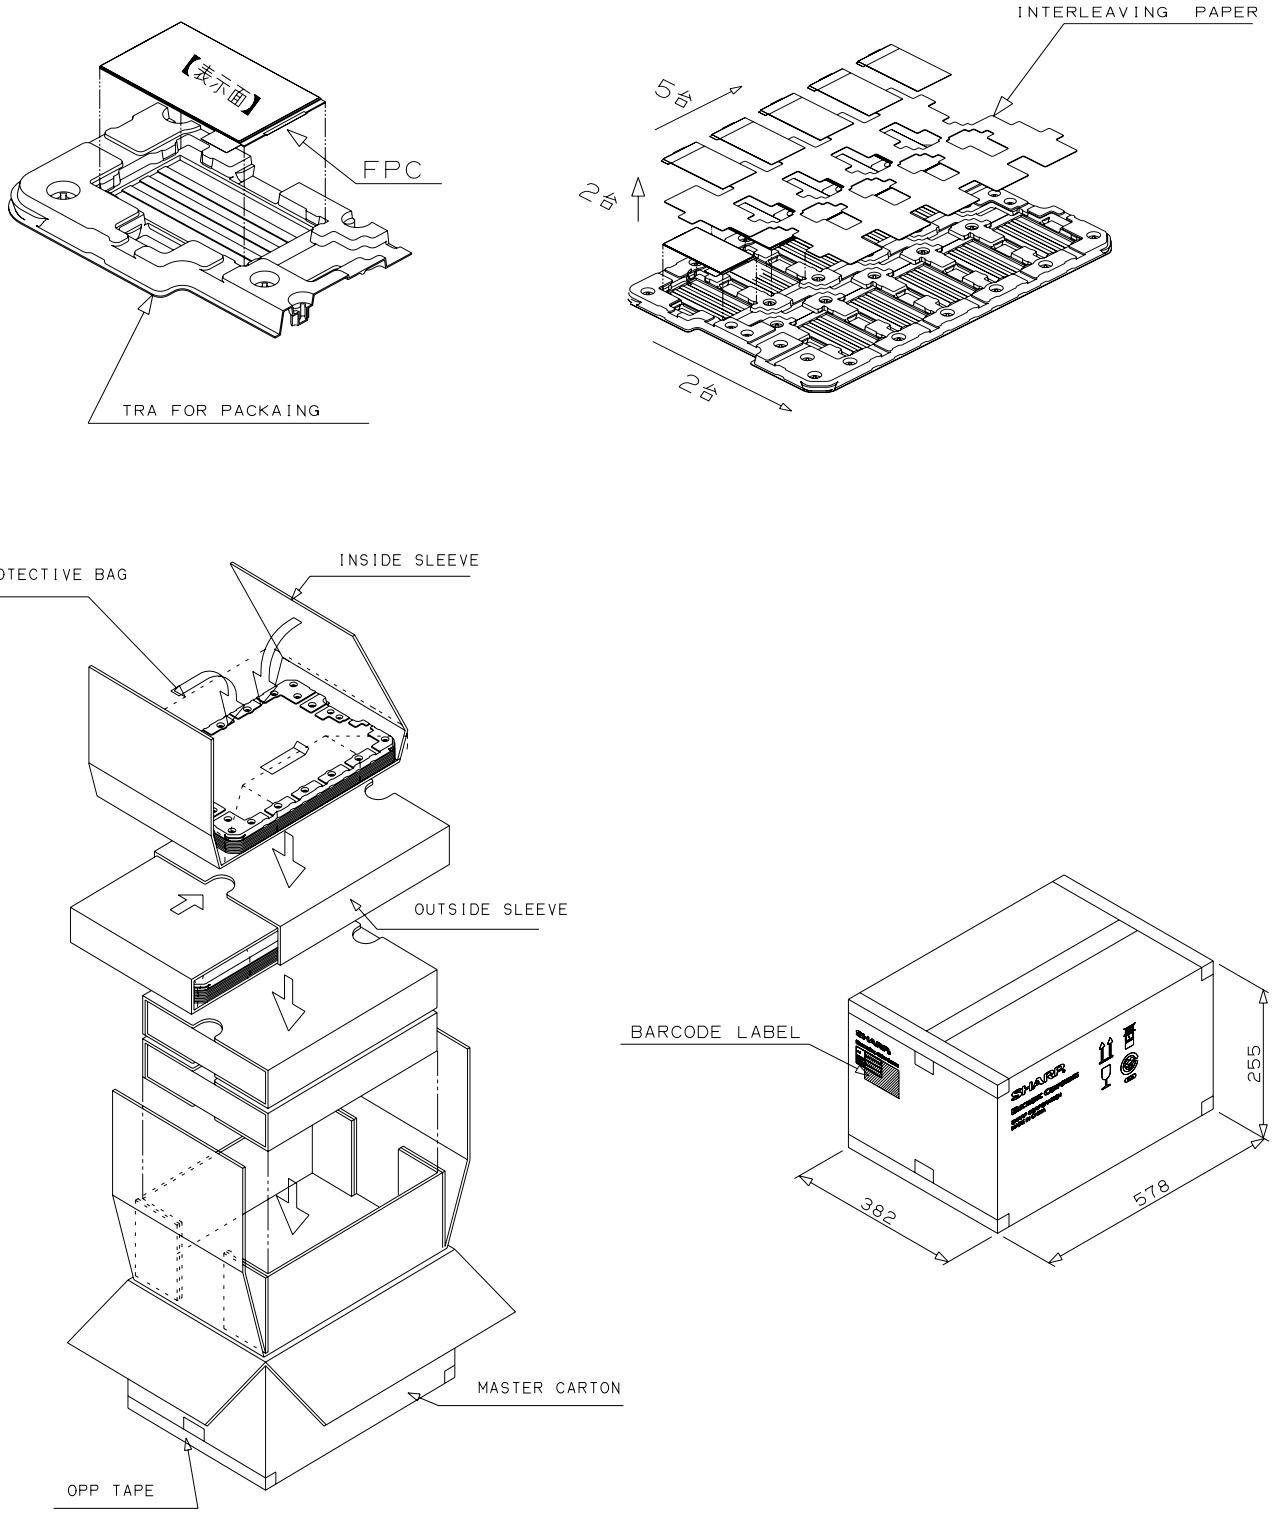
External appearance
No extreme defect exists.

16. For handling and system design

(1) Do not scratch the surface of the polarizer film as it is easily damaged.
(2) If the cleaning of the surface of the LCD panel is necessary, wipe it swiftly with cotton or other soft cloth. Do not use organic solvent as it damages polarizer.
(3) Water droplets on polarizer must be wiped off immediately as they may cause color changes, or other defects if remained for a long time.
(4) Since this LCD panel is made of thin glass, dropping the module or banging it against hard objects may cause cracks or fragmentation
(5) Certain materials such as epoxy resin (amine's hardener) or silicone adhesive agent (de-alcohol or de-oxym) emits gas to which polarizer reacts (color change). Check carefully that gas from materials used in system housing or packaging do not hart polarizer.
(6) Liquid crystal material will freeze below specified storage temperature range and it will not get back to normal quality even after temperature comes back within specified temperature range. Liquid crystal material will become isotropic above specified temperature range and may not get back to normal quality. Keep the LCD module always within specified temperature range.
(7) Do not expose LCD module to the direct sunlight or to strong ultraviolet light for long time.
(8) If the LCD driver IC (COG) is exposed to light, normal operation may be impeded. It is necessary to design so that the light is shut off when the LCD module is mounted.
(9) Do not disassemble the LCD module as it may cause permanent damage.
(10) As this LCD module contains components sensitive to electrostatic discharge, be sure to follow the instructions in below.
① Operators must wear anti-static wears to prevent electrostatic charge up to and discharge from human body.
② Equipment and containers Process equipment such as conveyer, soldering iron, working bench and containers may possibly generate electrostatic charge up and discharge. Equipment must be grounded through 100Mohms resistance. Use ion blower.
③ Floor is an important part to leak static electricity which is generated from human body or equipment. There is a possibility that the static electricity is charged to them without leakage in case of insulating floor, so the countermeasure(electrostatic earth:1×108Ω) should be made.
④Humidity Proper humidity of working room may reduce the risk of electrostatic charge up and discharge. Humidity should be kept over 50% all the time.
⑤ Transportation/storage Storage materials must be anti-static to prevent causing electrostatic discharge.
⑥Others Protective film is attached on the surface of LCD panel to prevent scratches or other damages. When removing this protective film, remove it slowly under proper anti-ESD control such as ion blower.
(11) Hold LCD very carefully when placing LCD module into the system housing. Do not apply excessive stress or pressure to LCD module. Do not to use chloroprene rubber as it may affect on the reliability of the electrical interconnection.
(12) Do not hold or touch LCD panel to flex interconnection area as it may be damaged.
(13) As the binding material between LCD panel and flex connector mentioned in 12) contains an organic material, any type of organic solvents are not allowed to be used. Direct contact by fingers is also prohibited.
(14) When carrying the LCD module, place it on the tray to protect from mechanical damage. It is recommended to use the conductive trays to protect the CMOS components from electrostatic discharge. When holding the module, hold the Plastic Frame of LCD module so that the panel, COG and other electric parts are not damaged.
(15) Do not touch the COG's patterning area. Otherwise the circuit may be damaged.
(16) Do not touch LSI chips as it may cause a trouble in the inner lead connection.
(17) Place a protective cover on the LCD module to protect the glass panel from mechanical damages.
(18) LCD panel is susceptible to mechanical stress and even the slightest stress will cause a color

change in background. So make sure the LCD panel is placed on flat plane without any continuous twisting, bending or pushing stress.
(19) Protective film is placed onto the surface of LCD panel when it is shipped from factory. Make sure to peel it off before assembling the LCD module into the system. Be very careful not to damage LCD module by electrostatic discharge when peeling off this protective film. Ion blower and ground strap are recommended.
(20) Make sure the mechanical design of the system in which the LCD module will be assembled matches specified viewing angle of this LCD module.
(21) This LCD module does not contain nor use any ODS (1,1,1-Trichloroethane, CCL4) in all materials used, in all production processes.

17.Packaging Specification



(1) Packaging quantities
320 modules per master carton
(2) Packaging weight
About 13.0 kg
(3) Packaging outline dimensions
578 mm×382 mm×255 mm (H)

18. For operating LCD module

(1) Do not operate or store the LCD module under outside of specified environmental conditions.

(2) At the shipment, adjust the contrast of each LCD module with electric volume. LCD contrast may vary from panel to panel depending on variation of LCD power voltage from system.

(3) As opt-electrical characteristics of LCD will be changed, dependent on the temperature, the confirmation of display quality and characteristics has to be done after temperature is set at 25 °C and it becomes stable.

19. Precautions for Storage

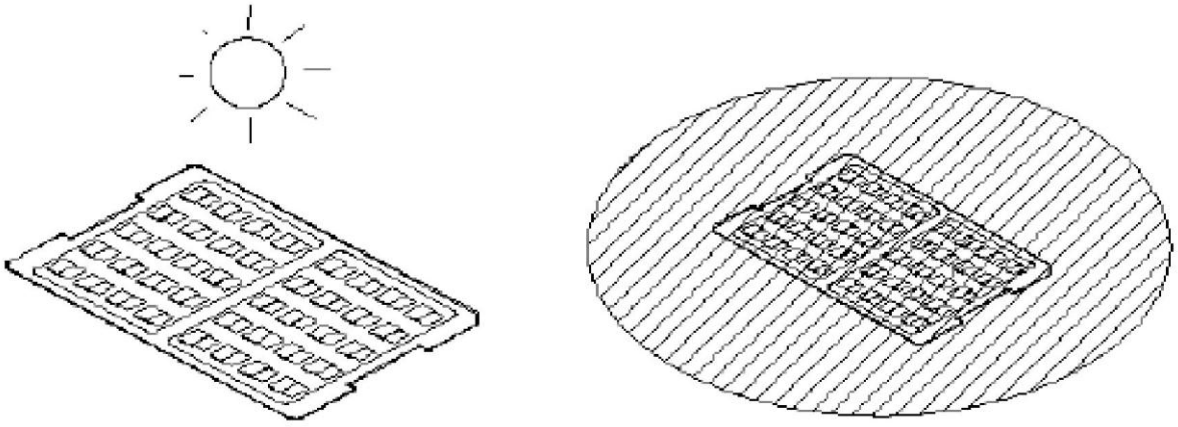
(1) Do not expose the LCD module to direct sunlight or strong ultraviolet light for long periods. Store in a dark place.

(2) The liquid crystal material will solidify if stored below the rated storage temperature and will become an isotropic liquid if stored above the rated storage temperature, and may not retain its original properties. Only store the module at normal temperature and humidity (25±5°C,60±10%RH) in order to avoid exposing the front polarizer to chronic humidity.

(3) Keeping Method

a. Don't keeping under the direct sunlight. b. Keeping in the tray under the dark place.

DON'T **DO**



(1) Do not operate or store the LCD module under outside of specified environmental conditions.

(2) Be sure to prevent light striking the chip surface.

20. Serial Number Label Identification

LQ040Y3DX80B ␣ 3 6 000001 ␣ Q ␣ SHARP

① ② ③ ④ ⑤ ⑥

① LCD Module Name
② Production Year (1,2,3…… *2013 → 3)
③ Production Month(1,2,3……9,X,Y,Z *March → 6)
④ Serial No(000001~)
⑤ Revision code(␣,A,B,C……) [Note20-1]
⑥ Internal Code

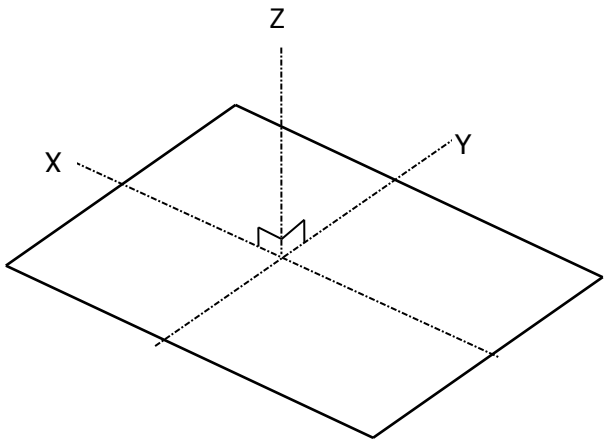
[Note20-1] ␣:blank

21. Reliability Test Items

No.	Test items	Test conditions
(1)	Temperature Cycling Storage	-30℃(0.5h)-----80℃(0.5h)*1cycle 100 cycle
(2)	High Temp. Storage	Ta=80℃ 240h
(3)	Low Temp. Storage	Ta=-30℃ 240h
(4)	High Temperature & High Humidity Storage	Ta=60℃ / 90% 240h
(5)	High Temp. Operation	Ta=70℃ 240h
(6)	Low Temp. Operation	Ta=-20℃ 240h
(7)	ESD	Discharge resistance: 0Ω Discharge capacitor:200Pf Discharge voltage: ±200V MAX Discharge 1 time to each input line "GND" of LCM is connected to GND of test system ground
(8)	Vibration test	Frequency range: 10Hz~55Hz Stroke: 1.5mm, Sweep: 10Hz~55Hz X, Y, Z 2hours for each direction (total 6 hours)
(9)	Shock test	980m/s^2, 6ms, ±X ; ±Y ; ±Z 3 times for each direction (JIS C0041, A-7 Condition C) [Note21-2]

[Note21-1] In the standard condition, there shall be no practical problems that may affect the display function.

[Note21-2] Definition of X, Y, Z direction is shown as follows



22. Other

22-1 RoHS

This TFT-LCD module is RoHS compliant products.

22-2 Attention when abandoning it

Please abandon it according to regulations and the ordinance when this module.

22-3 The country of origin of the TFT-LCD module

This LCD module manufacturing in CHINA (Wuxi Sharp Electronic Components Co., Ltd.)

418	Sleep out		W	1100		
419	delay	100 ms				

420	Display on		W	2900		
421	delay	100 ms				

Recommended Display On Sequence						
Step	Instruction/Parameters	Delay time	R/W	Reg. hex.	Data hex.	Command
1	DISPON		W	2900		
2	delay	100 ms				
3	B/L power on					

Recommended Power Off Register Setting

Recommended Display Off Sequence						
Step	Instruction/Parameters	Delay time	R/W	Reg. hex.	Data hex.	Command
1	B/L power off					
2	delay	100ms				
3	DISPOFF		W	2800		

Recommended SLEEP Mode Sequence						
Step	Instruction/Parameters	Delay time	R/W	Reg. hex.	Data hex.	Command
1	DISPOFF		W	2800		
2	B/L pwer off					
3	delay	100ms				
4	SLP IN		W	1000		

Recommended SLEEP OUT Sequence						
Step	Instruction/Parameters	Delay time	R/W	Reg. hex.	Data hex.	Command
1	Sleep out		W	1100		
2	delay	120 ms				
3	Display on		W	2900		
4	delay	100 ms				
5	B/L pwer on					
6						

Notes:

1. Undefined commands are treated as NOP (00h) command.
2. C=command, W=write, R=read, +=number of following parameters, (in Bytes), d=dummy clock cycle.
